ADAPTABLE AND CUSTOMIZABLE

All of the Software can be modified and adapted to work the way your business processes require.

EXPERIENCE AND COMMITMENT

MCCARTHY and COMPANY has over 20 years experience working with companies like yours. We can create and program systems for your processes.

ACCOUNTING SOFTWARE

From the Transaction to the Financial Statement Dynamics SL increases the efficiency, speeds up the processes, and increases the accuracy of your accounting process.

REALIZE PROFIT POTENTIAL WITH INTEGRATED PROJECT MANAGEMENT AND ACCOUNTING

When you bring together accounting and project data into one integrated system, you can free employees to focus on what matters most – providing great service and delivery. The Microsoft Office Project Connector integrates project and financial data between Microsoft Dynamics SL and Microsoft Office Project Enterprise Edition, providing deep visibility into project financial and schedule data and virtually eliminating data reentry. The result is Project Managers and Accounting can work from the same set of numbers, greatly reducing the traditional, arduous reconciliation.

Project-driven organizations can increase project efficiency and realization with unlimited work breakdown structures and budgets, complex allocations, proactive alerts and work flow, and much more. Integrated time and expense entry insure that billable activities are quickly passed on to the customer to reduce revenue leakage and improve cash flow. Automated processes streamline accounting, billing, and reporting for all project-related activity. Sophisticated budgeting capabilities let you test the “what if” scenarios key to effective planning. And whether employees are working onsite or remotely, they’ll be able to update and analyze project information via their Web browser.

The Project modules offer your company one of the biggest benefits: ease of adding change orders and addendums to contracts. This ability to add change orders, as they are generated, provides your company with a clear picture of the revised project totals.

DISTRIBUTION AND INVENTORY

Inventory is nothing more than a way for your company to lose money. From the day you order it to the day you sell it the risk is always present for an opportunity to have the inventory damaged, lost, stolen, sold but never billed, billed but never shipped. Dynamics SL is a program that tracks inventory from the day you order it to the day you sell it. With the proper procedures it is one of the best solutions to controlling your inventory, reducing your cost, and better serving your customers.

OVER

FIELD SERVICE THAT WORKS FOR YOU

When your business is about customers, you want to spend your time helping them and maximizing profits, not managing multiple systems for dispatch, service maintenance, and billing. Field Service applications support all fundamental aspects of service call processing and dispatching. For example, the Week-at-a-Glance Graphical Dispatch Board allows dispatchers to manage technician time and schedule calls more efficiently, while integration with Microsoft MapPoint ensures that technicians arrive at the right location at the right time. Efficiency in both billable time and customer satisfaction is obtained.

These Modules were designed for service based companies -- medical, architect, engineering, and contracting firms --- HVAC, plumbers, remediation. Field Service modules also support full management of service contracts from quotation to renewals; equipment management, including both routine and unscheduled maintenance; and full invoicing capabilities, including contracts, time and materials, and flat rate pricing. Engineers and technicians can stay focused on responding to customers, while your business stays focused on maximizing revenue from contracts.

Field Service Graphical Dispatch Board

The graphical dispatch board in the Field Service Management series allows your staff to quickly shift crews from jobs of lower priority to those of a higher priority.

MULTI-COMPANY AUTOMATICALLY

If you have multiple companies in your organization you understand the difficulty of performing the inter company entries and balancing them every month. Dynamics SL performs all inter-company entries automatically. Your inter-company accounts always balance, because the system prevents operators from entering an entry affecting another company and not recording the entry on the other company's books.

Meet industry-specific needs with confidence.

Microsoft Dynamics SL has designed standard product applications for many specific industries, including:

- **Professional Services**
- **Management Consulting**
- **Architectural and Engineering Firms**
- **General and Specialty Contractors**
- **Homebuilders**
- **Distributors and Retailers**
- **Non-profit organizations**
- **Healthcare and social services organizations**
- **Companies that are Project Based**
- **And many more.**
